

Terazosin HCl

- Terazosin hydrochloride, an α_1 -selective adrenoceptor blocking agent, is a quinazoline represented by the following chemical name and formula: (R,S)-Piperazine, 1-(4-amino-6,7-dimethoxy-2-quinazolinyl)-4-[(tetrahydro-2-furanyl) carbonyl]-, monohydrochloride, dihydrate. Terazosin is a white substance, freely soluble in water. Terazosin hydrochloride is indicated for the treatment of symptomatic benign prostatic hyperplasia (BPH). There is a rapid response with approximately 70 % of patients experiencing an increase in urinary flow and improvement in symptoms of BPH when treated with terazosin hydrochloride. Terazosin hydro-chloride is also indicated for the treatment of hypertension. It can be used alone or in combination with other antihypertensive agents. Capsules (terazosin capsules) are supplied in four strengths containing 1 mg, 2 mg, 5 mg, or 10 mg of terazosin.
